

Micronesia dataset (CSV) - events, per-region risk, cyber & sources

1 Day - \$5

1 Week - \$15

1 Month - \$39 - best value

```
function gbBuyCsv(s,dt,range){var
u='/api/data-checkout?country='+encodeURIComponent(s);if(dt)u+='&date='+encodeURIComponent(dt);if(range)u+='&range=
r.json();}).then(function(d){if(d&&d.url){location.href=d.url;}else{alert((d&&d.error)||'Dataset
download is not available yet.')}}).catch(function(){alert('Could not start checkout.')}});}
```

## Threat Trajectory

## Threat Breakdown

Each category 0-100, scored from live conflict, insurgency, crime, protest & Cloudflare Radar cyber feeds. See the full threat matrix

## Cyber & Internet Disruption

Layer-7 DDoS attack intensity (0-100, normalized) & internet outages over the last 28 days - Source: Cloudflare Radar.

## Situation Summary

Micronesia remains a low-threat environment with a composite threat score of 2 and minimal tracked security incidents. Two recent signals—a Coast Guard investigation (2026-06-08) and a public statement from the Micronesian government (2026-06-10)—have been flagged but lack corroborated operational details. Open-source reporting over the past 24-48 hours contains no clearly documented security, civil unrest, crime, or infrastructure disruption events; available coverage is limited to general background material and low-level tropical weather monitoring with no reported impact.

## Key Developments

- Micronesia (nationwide) - 2026-06-10 - Public Statement: Government issued a statement; specific subject matter and operational significance remain unconfirmed from open sources.
- Micronesia (nationwide) - 2026-06-08 - Coast Guard Investigation: Regional Coast Guard initiated an investigation; scope and implications are not yet clear from available reporting.
- Tropical Weather Monitoring (nationwide) - 2026-06-10: Low-confidence tropical disturbance tracking in progress across Micronesian territory; no active infrastructure disruptions, evacuations, or travel advisories reported as of last 24-48 hours.

\*Note: No additional specific, time-stamped security or instability incidents meeting the 24-48-hour recency threshold could be corroborated from open web, social media, or news archives.\*

## Highest-Risk Areas

Sub-national risk ranking data is unavailable; therefore, state-level or regional risk concentration

cannot be assessed at this time. Historical context indicates that cyclone and tropical weather preparedness affects all four Micronesian states (Yap, Chuuk, Pohnpei, Kosrae) and Palau and Marshall Islands relatively equally. Until granular incident or infrastructure data surfaces, risk is assumed broadly distributed across maritime and atoll-dependent communities.

## How GeoBit Would Assist

Security teams with personnel or assets in Micronesia should employ AOI Monitoring & Early Warning to establish persistent watch on Micronesian government emergency management channels, local media, and maritime/aviation NOTAM feeds for same-day alerts-especially around tropical activity. Multi-language OSINT and social/X monitoring can capture local government advisories and community reports faster than international news aggregators. Maritime & Aviation tracking combined with Routing & Network Analysis enables dynamic alternative-route planning should ports, airfields, or transit corridors become disrupted.

## 7-Day Outlook

Near-term outlook is stable; no escalating security or political instability signals are evident. Tropical weather systems merit continued passive monitoring, though current confidence in disruptive impact remains low. Duty-of-care teams should maintain baseline alerting on local government communications and avoid assuming extended news silence indicates absence of risk.
