## Cyber & Internet Disruption

Layer-7 DDoS attack intensity (0-100, normalized) & internet outages over the last 28 days - Source: Cloudflare Radar.

## Situation Summary

Panama remains a transit and logistics hub subject to structural criminality, irregular migration pressures, and localized state capacity gaps rather than acute national instability. The overall threat score (2/100, rank #87 globally) reflects persistent but manageable risk concentrated in border and Caribbean coastal zones. Security posture is stable relative to regional peers, though corporate and expat populations face exposure in high-risk sub-national areas and face emerging labor/regulatory tensions with government and foreign actors.

## Key Developments

Limitation: GeoBit's current data access does not support verified, timestamped incident reporting for the last 24-48 hours in Panama. The event signals listed above (drawn from the 19 tracked events) indicate diplomatic friction involving companies, government regulatory action, and foreign-actor statements, but specific incident timing, location, and confirmed status cannot be reliably attributed to the last 48 hours without access to live local media feeds and real-time social-media verification.

To identify genuine developments (last 24-48 hours) for briefing purposes, corporate security teams should monitor:

- Official channels: U.S. Embassy Panama daily security notices, FCDO Panama updates, Government of Canada travel advisory RSS feeds
- Local media live feeds: TVN Noticias, La Prensa, RPC Television (which report roadblocks, labor

actions, and crimes with near-real-time timestamps)

- Geolocated OSINT: Filtered X/Twitter and Telegram for keywords (\*protesta, cierre de vias, bloqueo, tiroteo, asalto\*) and location tags (\*Colon, Darien, Ciudad de Panama\*)

## Highest-Risk Areas

Darien (risk 95) and Colon (risk 88) dominate the risk profile and should be treated as off-limits or high-control-requirement zones for non-essential personnel. Darien remains a transit corridor for irregular migration and narcotics; Colon faces port-linked contraband activity, gang presence, and economic desperation. Bocas del Toro (82) and Panama Province (78) present secondary risk driven by similar dynamics-maritime smuggling, uncontrolled border areas, and limited police presence. Central and interior provinces (Cocle, Naso Tjer Di, Guna Yala) fall substantially lower and are suitable for standard precautions. Panama Oeste (75), the capital's western belt, warrants heightened awareness for opportunistic crime targeting residents and transiting workers.

## How GeoBit Would Assist

Corporate security teams would employ AOI Monitoring & Early Warning to track labor unrest, roadblocks, and criminal incidents in assigned high-risk zones with automated alerting on protest formations or attack patterns. OSINT fusion & corroboration (multi-language social-media search, local media monitoring, and event cross-referencing) would triangulate unverified reports and separate credible threats from rumor. Routing & Network Analysis would support contingency planning-identifying safe transit corridors and alternative logistics nodes if primary infrastructure (ports, highways) become compromised by labor action or security incidents.

## 7-Day Outlook

No major escalation is anticipated; the security picture is expected to remain consistent with baseline structural risks. Monitor regulatory and labor tensions involving foreign operators for signs of sustained government action or workplace unrest. Darien and Colon should remain under continuous watch for migration surge indicators or organized-crime activity shifts that could trigger short-notice access restrictions or personnel relocations.
