Situation Summary

Yemen remains a high-risk operating environment driven by ongoing conflict between Houthi forces (Ansar Allah) and Saudi-led coalition-backed government forces. The past week saw intensified airstrikes, ballistic missile activity, and ground fighting across multiple governorates, with Houthi forces conducting cross-border drone and missile strikes into Saudi Arabia. Civilian casualties continue to be reported amid attacks on infrastructure and populated areas; attribution and casualty figures from either side remain contested and difficult to independently verify.

Key Developments

- 20 November - Sana'a: Saudi-led coalition sources claimed airstrikes targeted Houthi missile and drone facilities, including six workshops and a supply depot; independent confirmation unavailable.

- 20 November - Hodeidah port: Coalition issued evacuation warning and announced planned strikes on port facilities alleged to handle weapons; unverified footage reportedly showed smoke near the port.

- 20 November - Saada and Taiz: Coalition operations against Houthi targets reported; coalition claimed destruction of seven military targets. Evidence limited to coalition statements.

- 20 November - Southern Saudi Arabia and Riyadh region: Coalition sources reported interception of three Houthi drones and one ballistic missile, including one drone near Riyadh.

- 18 November - Marib and al-Jawf: Government-aligned forces reported offensive operations, downing of a Houthi drone, and ongoing fighting; details from military-affiliated sources.

- 22 November - Yemen-Saudi conflict zone: Saudi-backed government forces claimed at least 86 Houthi

fighters and commanders killed or wounded in recent fighting; figure remains a party claim lacking independent corroboration.

- 22 November - Rabigh and Wadi al-Dawasir, Saudi Arabia: Houthis announced attacks on Rabigh oil refinery and Wadi al-Dawasir military radar installation; impact and damage not independently confirmed.

Highest-Risk Areas

Sub-national risk ranking data is unavailable this week. However, the event record indicates sustained concentration of combat, airstrikes, and ballistic missile activity in Sana'a, Hodeidah, Marib, Lahij, Taiz, and Saada. Marib and Taiz governorates continue to see intense ground fighting; Sana'a and Hodeidah face ongoing aerial bombardment. Cross-border strikes into Saudi Arabia indicate that northern and western Yemen remain active operational zones for Houthi forces.

How GeoBit Would Assist

Security teams with personnel or assets in Yemen would prioritize AOI Monitoring & Early Warning on key facilities (ports, oil infrastructure, government positions, airfields) to detect pre-strike patterns and receive real-time alerts. Conflict & Military mapping and force-structure tracking would clarify frontline positions, unit movements, and likelihood of territorial shifts. Routing & Network Analysis would enable identification of safer alternative travel corridors and assessment of checkpoint and checkpoint-security dynamics. Intel Sweep and OSINT fusion (combining X/Telegram monitoring, local media, and coalition/government statements) would permit rapid corroboration or refutation of casualty claims and tactical statements before operational decisions are made.

7-Day Outlook

Houthi missile and drone operations are likely to continue against coalition targets in Saudi Arabia and government positions in Yemen; the coalition will sustain airstrikes on alleged Houthi military facilities and infrastructure. Ground fighting in Marib, Taiz, and Lahij is expected to persist without major territorial shifts in the near term. Civilian risk remains elevated in populated areas near military concentrations, ports, and energy infrastructure; independent casualty verification will remain constrained.
