// MANAGED GEOBIT · SOFTWARE + PEOPLE, ONE SERVICE

LET US TAKE SOME OF THE LOAD OFF.

Your team has more to watch, map and brief than it has hours. **GeoBit gives you the people and the platform together**: a named operator, or a whole desk, one to ten as the job needs, running the monitoring, the maps, the intelligence and the picture for you. You keep the decision. We carry the rest.

1–10	Next day	Monthly	0
OPERATORS PER ACCOUNT	WORK STARTS AFTER SIGNATURE	AT-WILL AFTER MONTH ONE	HIRES FOR YOU TO MAKE

WE BUILT IT. WE RUN IT. WE SIT IN THE SEAT IT REPLACES.

Buy the output — alerts, maps, briefs, the picture — not another tool to run.

Our system carries the load. Your team carries the decision.

Same budget as a role. The role arrives with the system already running.

// BUY THE OUTPUT

OUR SYSTEM DOES A LOT. LET IT CARRY THE LOAD.

The GeoBit platform already watches ~130 countries in ~30 languages around the clock, answers plain-English questions with live maps, keeps one operating picture on every phone, scores routes and sites, writes the briefs and connects your own data. That is a great deal of capacity behind one login.

Managed GeoBit puts our people on it for you. You receive the finished product — the alert, the map, the brief, the picture, the working agent layer — on your cadence and your templates. Your team spends its hours on judgment and relationships instead of on volume.

Every company is building software now, and every team has more to watch than hours to watch it. The budget that moves is the one for people. We make it go further: the person you hire arrives with a production system behind them, so one operator does the work of a team, from week two.

YOUR GOAL	HOW THE DESK DELIVERS IT
Reach a new market	**Coverage and a named operator in weeks**, before you hire locally
Expand a stretched team	One to ten operators, no hiring cycle; scale monthly
Absorb a surge	A desk that already exists, on your channels in days
Cover nights and weekends	The machine watches 24/7; people on your hours or follow-the-sun
Reduce operating cost	The system does the volume; your spend buys judgment and output
Keep control	Your standards, your reporting lines, your decision

// THREE WAYS IN

EMBED US. OUTSOURCE A DIVISION. EXPAND WITH US.

01 · EMBED

EMBED US IN YOUR TEAM

One named operator or a small cell inside your org, on your channels and reporting lines. They arrive with the platform already running. Your people use GeoBit as much or as little as they like.

02 · OUTSOURCE

OUTSOURCE A DIVISION TO US

The whole function, run end to end: the watch floor, the GIS desk, the intel cell, the ops desk. You receive the alerts, the maps, the briefs and the picture. The division stops living on your org chart.

03 · EXPAND

EXPAND INTO A NEW MARKET WITH US

A region, a client, a line of business you have no people for yet. We stand up the desk and the coverage in weeks; you bring the relationship and the standards. Scale it when it pays, stand it down when it does not.

What comes with every seat: the full GeoBit system. Common Operating Picture and command and control, GeoBit Mobile for your field team, journey management and executive protection, site security and Site Watch, AOI monitoring, the GSOC watch, automated briefs and SITREPs, mapping, the developer API and the agent layer. One to ten people run it for you.

// THREE WAYS TO GET THERE

THE FASTEST ONE IS THE DESK.

SOFTWARE ALONE

POWERFUL, IF YOU HAVE THE HOURS TO RUN IT.

Many teams operate the platform themselves. It rewards the team with time to sit on it daily; if yours does not, the output waits.

PEOPLE ALONE

CAPABLE, AND SLOW TO START.

A good hire builds their own stack over a first quarter. The quality follows the person, and leaves with them.

PERSON + SYSTEM · GEOBIT

THE PEOPLE WHO BUILT THE SYSTEM, OPERATING IT AS YOUR DESK.

Operator and machine arrive together, fluent in each other from day one. Output turns on in weeks and scales monthly.

// THE CHAIRS

WHICH SEAT ARE WE SITTING IN?

Never "services". Always the org-chart object. Each chair is a process or a cost center we take off your roster: a desk, a shift, a reporting loop, a hire you can't fill, a tool you bought and never staffed.

THE NIGHT SHIFT STARING AT FEEDS

WE FILL THE GSOC SEAT →

AI watch on every source plus one named analyst on your hours. Alarm triage, sensor-to-OSINT correlation, traveller check-ins, incident logs, the handover written.

3 GIS PEOPLE + A TICKET QUEUE

WE ARE THE GIS DESK →

One named analyst with chat-to-map and 900+ functions behind them. Maps, layers, analyses and pipelines delivered as finished work, not a backlog.

THE WEEKLY SITREP FACTORY

WE FILL THE INTELLIGENCE ANALYST ROLE →

Collection stack plus judgment. Daily and weekly briefs carrying assessment, on your template, under your name if you want.

THREE PICTURES AND A WHATSAPP GROUP

WE RUN THE OPS DESK →

One common operating picture on the desk, the iPad and every phone, with command and control, tracking and encrypted comms, operated for you.

MOVEMENTS PLANNED ON A SPREADSHEET

WE RUN THE EXECUTIVE PROTECTION & JOURNEY DESK →

Route risk by stretch, the detail tracked live, safe havens maintained, panic to escalation handled by people who watch it every day.

AN ASSESSMENT THAT IS TWO YEARS OLD

WE KEEP THE SITE WATCH →

A fused, explained threat picture for every site you run, refreshed against a live baseline, with someone who tells you when it moved.

"SOMEONE SHOULD BE WATCHING THAT"

WE MONITOR YOUR AREAS →

We watch them 24/7 in ~130 countries and ~30 languages, and a person calls you when it matters.

THE PRINCIPAL AI ENGINEER YOU CAN'T HIRE

WE ARE THE AGENT-PLATFORM TEAM →

The people who shipped orchestration, cost breakers and audit in production, embedded in your repo.

THE CELL YOU STAND UP EVERY CRISIS

WE ARE THE SURGE CELL →

Election, evacuation, strike, storm. A desk that already exists, on your channels within days, stood down when it is over.

// SIZES · QUOTED AFTER A SCOPING CALL

ONE CHAIR

FILL A SEAT

1

NAMED OPERATOR · PLATFORM INCLUDED

- One named person on your channels
- Monitoring, maps or briefs on your template
- Exceptions escalated to a human, always
- Starts the next business day, one-month minimum

MOST COMMON

RUN A DESK

2–4

OPERATORS · COVERAGE HOURS · ONE LEAD

- A desk lead plus operators on your hours
- GSOC watch, Ops Desk, executive protection desk or intel cell
- Weekend and holiday coverage included
- Monthly output and cost review

A FUNCTION

OWN A FUNCTION

5–10

OPERATORS · 24/7 · DEDICATED STACK

- Round-the-clock coverage across time zones
- Dedicated or on-prem deployment
- Embedded engineers for your agent layer
- Your division, run by the people who built it

Priced against what the seat costs you fully loaded: salary, recruiter, ramp, tools, manager time, coverage gaps. Software-only seats remain available for teams that already have operators.

// HOW IT WORKS

01

SCOPE THE SEAT

A thirty-minute call: what the desk must produce daily, who receives it, hours and time zones. You get a scope, a start date and a quote.

02

STAND UP THE DESK

From the next business day. We connect your sources and areas, load your templates and escalation paths, put a named operator on your channels.

03

RUN IT

Alerts, maps, briefs, the picture, the agent layer, on your cadence, in your format. Exceptions escalate to a person. Everything is logged.

04

YOU KEEP THE DECISION

Your reporting lines, your standards, your call. Monthly review of what the desk produced. At-will after month one.

// PRECISION IS THE TRUST

WE TAKE THESE OFF YOUR ROSTER

WHAT WE REPLACE

- The night watch
- The ticket queue to GIS
- The daily and weekly brief factory
- The "we need a principal AI engineer" req
- The surge cell you stand up every crisis
- The tool you bought and never staffed

WE DO NOT CLAIM THESE

WHAT STAYS YOURS

- Corporate security as a function
- Your product organisation
- The decision, every time
- Your reporting lines and templates
- Bespoke work we build for you: it is yours
- GeoBit modules stay ours and are licensed, so you never rebuild the spine. Agreed before week one.

// THE BENCH

EXPERTS ACROSS MANY FIELDS, ALREADY VETTED.

The desk is staffed from the GeoBit Expert Network: specialists who pass a track-specific assessment and a human review before they see an engagement. That is how one account scales from one operator to ten without a hiring cycle, and how a chair gets the right kind of expert, not a generalist.

GIS & SPATIAL DATA

Cartography, spatial databases, ETL, spatial statistics, Esri and open-source stacks.

REMOTE SENSING & IMAGERY

Optical, multispectral and SAR, change detection, annotation, photo-interpretation.

GEOAI & MACHINE LEARNING

Spatial models, imagery computer vision, foundation-model evaluation.

GEOINT, GEO-OSINT & RISK

Image geolocation and verification, activity analysis, sub-national risk, route and site risk.

3D & SPATIAL COMPUTING

LiDAR, point clouds, photogrammetry, digital twins, 3D tiles, AR.

DESK OPERATORS

Intelligence analysts, GSOC operators, protective-intelligence and travel-risk specialists, embedded geospatial engineers.

Experts set their own rate, take one assessment, accept the engagements they want, and are contracted and paid through GeoBit. Geospatial specialists join at geobit.ai/experts/join.

// PROOF

PRODUCTION ON THREE CONTINENTS

The same stack runs live monitoring, briefs and watch desks today. Not a pilot environment.

THE FOUNDER EMBEDS

The person who designed the platform is the person who can sit in the seat. No hand-off to a delivery team that learned it last month.

DOCUMENTED BY DELOITTE

A country-level assessment that took a security firm 2–5 business days, done in minutes. "The Space Edge", Deloitte Center for the Edge, 2026.

HIRE US.

Tell us about the empty chair: the seat you cannot fill, the shift nobody wants, the tool nobody staffed. We come back within one working day with a scope, a start date and a quote.
